**Humidity and Temperature Sensor for
High Humidity and Chemically
Polluted Conditions**

HTS801

Humidity and Temperature Sensor for High Humidity and Chemically Polluted Conditions

The HTS801 sensors are designed to meet highest demands of stable and highly accurate measurement of relative humidity (RH) and temperature (T) under most challenging conditions. HTS801 is suitable for a wide range of applications from -80 °C to 180 °C (-112 °F to 356 °F) and 300 bar (4350 psi).

Outstanding Measurement Performance

The heated high-end E+E RH and T sensing element enables reliable and long-term stable measurement in extremely humid or chemically polluted environment. The monolithic structure of the RH/T sensing element, protected by the E+E proprietary coating, allows for fast recovery after condensation or chemical contamination.

Versatile and Robust

The six HTS801 versions are available with several probe and cable lengths. With various heating modes, the HTS801 can be perfectly tailored to the specific needs of each measurement task. It features an IP65 / NEMA 4 polycarbonate or stainless-steel enclosure which can accommodate various interface modules and electrical connection options.

Outputs and Configuration

The measured data is available on two freely scalable analogue outputs, on the RS485 (Modbus RTU) or Ethernet-PoE (Modbus TCP) interface and on the alarm (relay) outputs. The configuration and the RH and T adjustment of the HTS801 can be performed with the free PCS10 Product Configuration Software. An optional 3.5" colour display with push-buttons is available for configuration and visualisation.

HTS801 with polycarbonate enclosure and display

Sensing probes

HTS801 with stainless steel enclosure and display

Features

Measurement performance

- Highest RH/T accuracy
- Working range -80...+180 °C (-112...+356 °F) and up to 300 bar (4 350 psi)
- Designed for chemical contamination and continuous high humidity conditions
- All RH related physical quantities

3.5" TFT colour display

- Shows up to 4 measurands simultaneously
- Layout and measurands freely selectable
- Data logger for 20 000 values per measurand
- Logged data shown graphically
- Diagnosis functions
- Intuitive device setup with push-buttons

Enclosure

- IP65 / NEMA 4X protection rating
- Polycarbonate or stainless steel
- Easy mounting and service
- Versatile connection options

USB service interface

- Configuration, adjustment and firmware update
- Download logged data
- 5 status LEDs

Outputs

- 2 freely scalable analogue outputs current / voltage
- Error indication according to NAMUR
- Modbus RTU / Modbus TCP
- 2 alarm outputs
- Configurable via software or push-buttons

RH/T sensing element

- Operating modes
 - Condensation Guard (CG)
 - High Humidity Guard (H²G)
- Automatic ReCovery (ARC)
- Protected by:
 - E+E proprietary coating
 - Wide choice of filter caps

Sensing Probes

- rapidX intelligent pluggable probe with included sensing element data
- Six probes depending on
 - T range
 - p range
 - Environmental condition
- Various probe and cable lengths
- T28 with specific design for best fit in high-end radiation shields

Inspection certificate

According to DIN EN 10204-3.1

Features

rapidX Smart Probe

The HTS801 with PC7 option (see ordering guide) features the intelligent pluggable rapidX probe, which enables a plug-and-play probe exchange. Any HTS801 rapidX Smart Probe automatically uploads its specific parameters upon connecting it to the HTS801 electronics and can be replaced even during operation without any configuration, adjustment or calibration. This is particularly useful for excluding down time and its corresponding costs in harsh industrial environment, where the probe can get occasionally damaged.

Protective Sensor Coating

The E+E proprietary sensor coating is a protective layer applied to the sensing elements, their leads and soldering points. The coating substantially extends sensor lifetime and ensures optimal measurement performance in corrosive environment (salts, off-shore applications). Additionally, it improves the long term stability in dusty, dirty or oily applications by preventing stray impedance caused by deposits on the active sensor surface or on the electrical connections.

Automatic ReCOVERY (ARC) Function

Automatic ReCOVERY (ARC) is available for all HTS801 types and is used to remove chemical pollution and thus eliminate possible drift effects of the RH/T sensing element. This is achieved with an intense heating of the sensing element. The function can be perfectly tailored to the application requirements being triggered:

- manually via PCS10 or display and push-buttons,
- by a certain cyclic time interval configurable via PCS10,
- using RS485 or Ethernet with Modbus commands, or
- using the ARC module option (AM1).

Type-specific Operating Modes

Condensation Guard (CG)

HTS801 sensors with Condensation Guard (CG) are designed for applications with variable humidity over the full range 0...100 %RH where condensation may occur for a short time. The CG protects the RH/T sensing element by targeted heating and prevents temporary condensation and its negative effects on the measurement results. The CG heating is triggered by a predefined RH setpoint factory set via ordering guide. The setpoint is configurable with PCS10 and display and push buttons.

High Humidity Guard (H²G)

HTS801 sensors with High Humidity Guard (H²G) enable accurate RH measurement even in permanent high humidity and condensing conditions. Continuous, adaptive heating of the sensing element and of the probe body (dual heating system) prevents drift effects and condensation on the sensor element. The monolithic construction of the sensing element enables fast RH response times under condensing conditions.

Operating Mode	HTS801 Type	Use in environments with	Function Trigger
Condensation Guard (CG)	T5/T9/T10	Temporary condensation	RH setpoint ¹⁾
High Humidity Guard (H ² G)	T7/T17/T28	Continous high humidity and condensation	Always on

1) Factory setting: acc. to ordering guide

Dimensions

Values in mm (inch)

Enclosure

Polycarbonate (with and without display)

Stainless steel (with and without display)

Type T5 Probe

Up to 180 °C (356 °F)

Type T7 Probe

Pressure-tight up to 20 bar (300 psi) for Td measurement

Type T9 Probe

Pressure-tight up to 300 bar (4 350 psi) with cut-in fitting

Type T10 Probe

Pressure-tight up to 20 bar (300 psi) with sliding fitting

Type T17 Probe

Pressure-tight up to 20 bar (300 psi) with optional cut-in fitting

Type T28 Probe

For meteorological applications

1) Refer to ordering guide
